SUBJECT: Ohio/TDD# F5-8009-3
Cuyahoga Co./East 49th St. Dump

On September 10, 1980, the writer and E. Jurczak drove to the 'East 49th St. Dump'.

The site was an open dump previously operated by General Electric. After final cover, the property was sold to C.E.I. of Cleveland, Ohio. C.E.I. has built a substation on the site. There are lots of generators, wires, and small metal towers on the site in addition to a low brick building. There is a cyclone fence topped with barbed wire surrounding the site.

Nothing was seen on the ground (i.e. no puddles, refuse, drums sticking up, etc.), or coming up out of the ground. The site is on the slope of a river valley. It was not possible to walk the river bank because U.S. Steel has built a plant on the river bank down gradient from the dump site.

After reviewing the preliminary assessment and the additional information gained, it is suggested that the OEPA initiate the following:

1. Permission be granted by U.S. Steel to walk the river bank and look for potential leachate.
 - a. If leachate is found, samples should be taken and analysis be run. If major pollutants are found, it is recommended that monitor wells be drilled.
 - b. If leachate is not found, no further work is recommended.

Attached is a copy of the preliminary assessment completed by OEPA and amended by the off-site reconnaissance performed by us. Please note that the apparent seriousness of the problem has been changed from unknown to low.
